

More than 950 million people in the world need glasses, but cannot afford them. Children can't learn, adults can't work and provide for their families.

## Our solution: GoodVision Glasses

Thanks to those, people can see properly for the first time in their lives.

### Locally manufactured

The GoodVision Glasses are produced locally and without electricity on a simple bending machine. Jobs for optical specialists as well as eyewear producers are created in Latin America, Asia and Africa.

### Globally active

In eleven countries, we perform free eye tests and fit eyeglasses individually. We raise awareness and educate people about eye care, and provide assistance if a cataract operation becomes necessary.

### Sustainably structured

Numerous local partners support our goal of providing sustainable eye care. In addition, we are part of a global network of development work in this field.

Our work makes a significant contribution to achieving **11 of the 17 UN Sustainable Development Goals.**
